

Ovoderm®

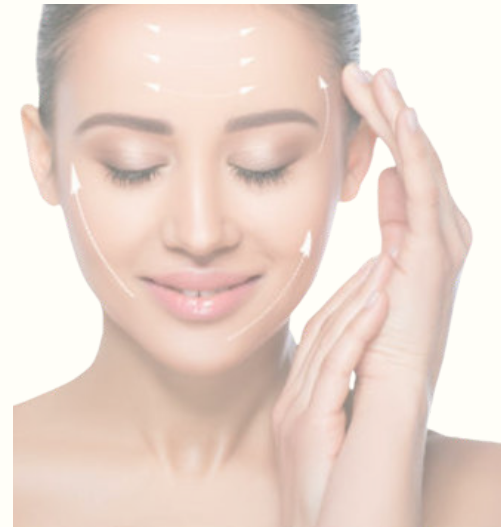

VEGGIE COLLAGEN

A HOLISTIC APPROACH TO SKIN AGING

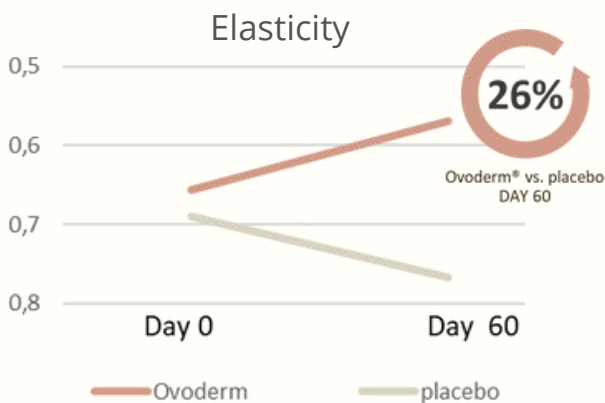

Ovoderm® is a **Veggie Collagen** branded ingredient with clinically proven capacity to fight the **main signs of skin aging**. Together with the collagen, our manufacturing process gets a **full-spectrum** extraction of all the active biomolecules inside the source (**hyaluronic acid, elastin, dermatan sulphate, keratin...**), preserving its natural composition, structure, and synergy between all those biomolecules.

01 Smooths out wrinkles & fine lines

Thanks to its outstanding capacity to boost endogenous **collagen** production and its ability to inhibit collagen degradation, Ovoderm® contributes to the normalization of skin collagen content. The increased collagen level leads to the attenuation of skin wrinkling and roughness.

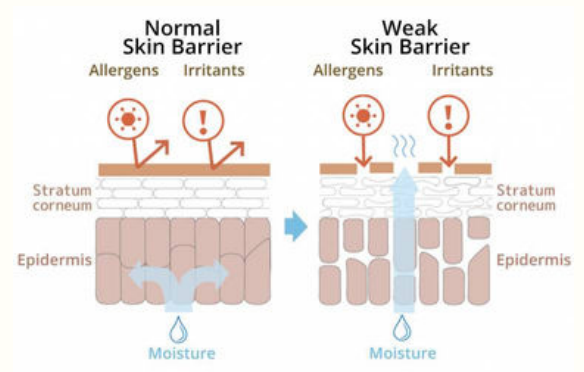

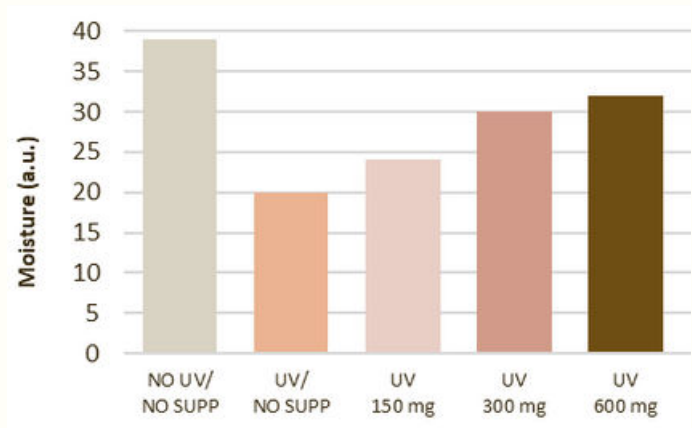

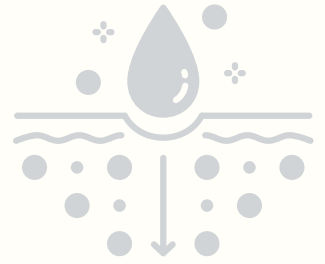

Improves skin elasticity and firmness 02

Ovoderm® also triggers the production of **elastin**, which provides stretch and elasticity to the skin. Clinical studies show the capacity of Ovoderm® to increase skin elasticity and firmness (based on skin analyser measurements).

03 Fights skin dryness

Ovoderm® administration leads to an enhanced skin hydration due to its effectiveness to restore **skin barrier function** and to increase the endogenous production of **hyaluronic acid**. Both effects lead to a better water retention inside the skin and therefore to a better hydrated skin.

Attenuates dark spots 04

Due to its capacity to inhibit the activity of the **tyrosinase** enzyme (involved in the production of melanin), Ovoderm® leads to an even skin tone.
